

EMERGENCY OBSTETRIC AND NEONATAL CARE NEEDS ASSESSMENT SURVEY 2011

A case of a severe neonatal morbidity

As part of this exercise we invite you to conduct a discussion based on the following:

This activity is designed with the objective of assessing the care provided for the most recent event of an averted neonatal death. Please be kind enough to have a discussion with all the relevant stakeholders / team members in your unit (Pediatrician, Neonatologist, PG trainers, medical staff, nursing staff, staff in other facilities – blood bank, laboratory) for this qualitative assessment.

Suggested areas for discussion

1. Diagnosis of the selected case
2. What were the key / crucial steps in the successful management of the patient (list)
 - a. (Staff, equipment, staff training, other service availability, etc...)
3. What would you consider as strengths in the successful management of this patient (list)
 - a. (Staff, equipment, staff training, other service availability, etc...)
4. What would you consider as limitations (list)
5. What are the opportunities / requirements you have identified in order to enhance the care provided

We assure you that this information will be collected anonymously and will be considered as strictly confidential. Please feel free to call Prof. Lalani Rajapaksa (071800049), Dr. Lakshman Senanayake (0777730688) or Dr. Padmal de Silva (0718142029) for further clarifications on this survey.
